DETAILED ACTION

Election/Restrictions

Claim 1 is allowable. Claims 100,101, 103-111, previously withdrawn from consideration as a result of a restriction requirement, requires all the limitations of an allowable claim. Pursuant to the procedures set forth in MPEP § 821.04(a), the restriction requirement among the inventions species, as set forth in the Office action mailed on 1/12/2007, is hereby withdrawn and claims 100,101, 103-111 hereby rejoined and fully examined for patentability under 37 CFR 1.104. In view of the withdrawal of the restriction requirement, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Examiners's Amendment

An examiner's amendment on the record appears below. Should changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ms. Gillian Gardner on February 24th, 2010. The application has been amended as Follows:

IN THE CLAIMS

a layer of ceramic ion conducting electrolyte defining first and second opposing surfaces; a conductive anode layer positioned at the first surface of said electrolyte layer; and a conductive cathode layer positioned at the second surface of said electrolyte layer; wherein said electrolyte layer is disposed between said anode layer and said cathode layer;

wherein said conductive cathode layer ~~comprises~~ consists essentially of a copper-substituted ferrite perovskite material and the copper-substituted ferrite perovskite

material is in contact with said electrolyte layer;

wherein said solid oxide fuel cell is operable at temperatures less than about 750 °C.

18. (Original) The fuel cell in accordance with claim 1 wherein said cathode layer ~~comprises~~ consists essentially of a perovskite composition having the formula:

20. (Previously presented) A solid oxide fuel cell assembly for electrochemically reacting a fuel gas with a flowing oxidant gas to produce a DC output voltage, said assembly comprising a plurality of integral fuel cell units, each unit comprising a layer of ceramic ion conducting electrolyte disposed between a conductive anode layer and a conductive cathode layer, and further comprising a metallic interconnect between the anode layer of a first fuel cell unit and the cathode layer of an adjacent second fuel cell unit; wherein the cathode layer of at least one of said fuel cells ~~comprises~~ consists essentially of a copper-substituted ferrite perovskite composition and the copper-substituted ferrite perovskite composition is in contact with said electrolyte layer; wherein said solid oxide fuel cell is operable at temperatures less than about 750 °C.

37. (Original) The fuel cell assembly in accordance with claim 20 wherein said cathode layer ~~comprises~~ consists essentially of a perovskite composition having the formula:

115. (Previously presented) A solid oxide fuel cell for electrochemically reacting a fuel gas with an oxidant gas to produce a DC output voltage, said solid oxide fuel cell comprising:

a layer of ceramic ion conducting electrolyte defining first and second opposing surfaces;

a conductive anode layer positioned at the first surface of said electrolyte layer; and

a conductive cathode layer positioned at the second surface of said electrolyte layer;

wherein said electrolyte layer is disposed between said anode layer and said cathode layer; and wherein said conductive cathode layer ~~comprises~~ consists essentially of a copper-substituted lanthanum ferrite perovskite material that includes at least one B-site dopant selected from the group consisting of nickel, cobalt, manganese, aluminum and chromium;

wherein said solid oxide fuel cell is operable at temperatures less than about 750 °C.

128. (Previously presented) A solid oxide fuel cell assembly for electrochemically reacting a fuel gas with a flowing oxidant gas to produce a DC output voltage, said assembly comprising a plurality of integral fuel cell units, each unit comprising a layer of ceramic ion conducting electrolyte disposed between a conductive anode layer and a conductive cathode layer;

wherein said solid oxide fuel cell is operable at temperatures less than about 750 °C.

Claims 96-99 are cancelled.

REASONS FOR ALLOWANCE

Claims 1-10,13-29,32-38,100, 101,103-120,122-128 and 130-132 are allowed.

The prior art does not teach or suggest a solid oxide fuel cell including all of the claimed features. The most pertinent art includes Aizawa et al. (US 6,692,855), Forthmann et al. (Ceramic coatings for cathode contacts of solid oxide fuel cells,

Werkstoffwoche '98, Band II 1: Symposium 3, Werkstoffe fuer die Energietechnik;
Symposium 7, Werkstoffe und Korrosion, Munich, Sept., 1998 (1999), Meeting Date
1998, 149-154, Kindermann et al. (J. Am. Ceram. Soc. 80 [4], 909-914 (1997.) and
Sarkar et al. (U.S. Pub. No. 2003/0134176 A1).

The prior art references do not teach or suggest a solid oxide fuel cell assembly wherein
"said conductive cathode layer consists essentially of a copper-substituted ferrite
perovskite material and the copper-substituted ferrite perovskite material is in contact
with said electrolyte layer"; As claimed by Applicant in claims 1 and 20.

The prior art references do not teach or suggest a solid oxide fuel cell assembly wherein
*"said electrolyte layer is disposed between said anode layer and said cathode layer; and
wherein said conductive cathode layer consists essentially of a copper-substituted
lanthanum ferrite perovskite material that includes at least one B-site dopant selected
from the group consisting of nickel, cobalt, manganese, aluminum and chromium";* As
claimed by Applicant in claim 115.

The prior art references do not teach or suggest a solid oxide fuel cell assembly wherein
*"the cathode layer of at least one of said fuel cells-consists essentially of a copper-
substituted ferrite perovskite material that includes at least one B-site dopant selected
from the group consisting of nickel, cobalt, manganese, aluminum and chromium";* As
claimed by Applicant in claim 128.

For these reasons, the claims are allowed over the prior art. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ben Lewis whose telephone number is 571-272-6481. The examiner can normally be reached on 8:30am - 5:30pm.
